1. Mechanical Specification & Diagram

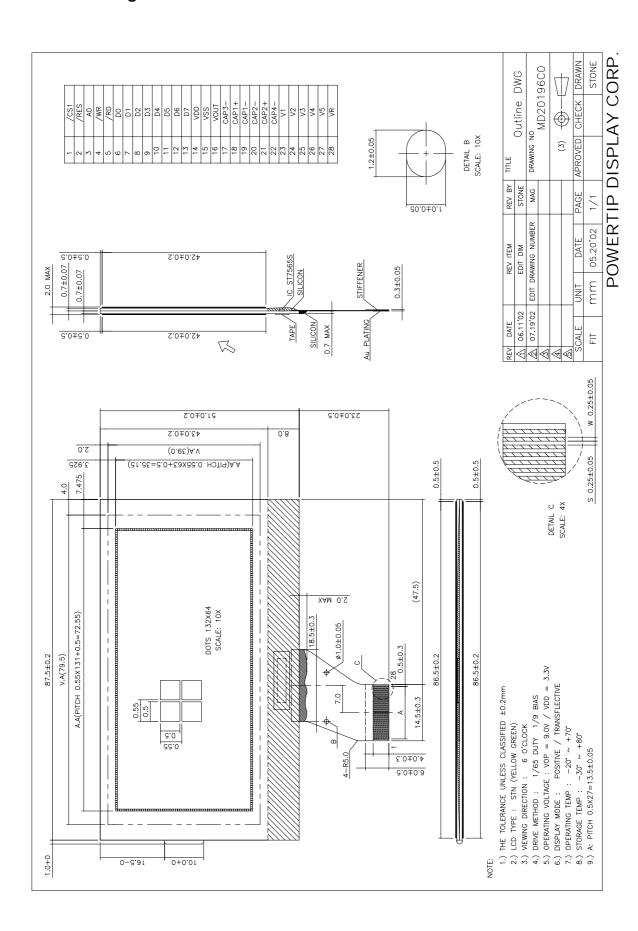

1.1 Mechanical Specification

ITEM	STANDARD VALUE	UNIT
NUMBER OF DOTS	132 × 64	DOTS
MODULE DIMENSION	87.5 (W) × 74.0 (H) × 2.0 (T)	mm
EFFECTIVE DISPLAY AREA	79.5 (W) × 39.0 (H)	mm
DOT SIZE	0.5 (W) × 0.5 (H)	mm
DOT PITCH	0.55 (W) × 0.55 (H)	mm
APPROX. WEIGHT	17.6	g
LCD TYPE	STN Yellow green (Positive / Trans	sflective)
DRIVER METHOD	Duty: 1/65 Bias: 1/9)
VIEWING DIRECTION	6 O'clock	
BACK LIGHT		
DRIVER IC	ST7565S

6. Interface Pin Function

NO	SYMBOL	FUNCTION
1	/CS1	This is the chip select signal. When CS1 = "L" and CS2 = "H," then the chip select becomes active, and data/command I/O is enabled.
2	/RES	When RES is set to "L," the settings are initialized. The reset operation is performed by the RES signal level.
3	A0	This is connect to the least significant bit of the normal MPU address bus, and it determines whether the data bits are data or a command. A0 = "H": Indicates that D0 to D7 are display data. A0 = "L": Indicates that D0 to D7 are control data.
4	/WR	 When connected to an 8080 MPU, this is active LOW. (R/W) This terminal connects to the 8080 MPU WR signal. The signals on the data bus are latched at the rising edge of the WR signal.
5	/RD	When connected to an 8080 MPU, this is active LOW. (E) This pin is connected to the RD signal of the 8080 MPU, and the ST7565S series data bus is in an output status when this signal is "L".
6	D0	
7	D1	
8	D2	
9	D3	This is an 8-bit bi-directional data bus that connects to an 8-bit or 16-bit
10	D4	standard MPU data bus.
11	D5	
12	D6	
13	D7	
14	VDD	Shared with the MPU power supply terminal Vcc.
15	VSS	This is a 0V terminal connected to the system GND.
16	VOUT	DC/DC voltage converter. Connect a capacitor between this terminal and VSS.
17	CAP3+	DC/DC voltage converter. Connect a capacitor between this terminal and the CAP1+ terminal.
18	CAP1+	DC/DC voltage converter. Connect a capacitor between this terminal and the CAP1- terminal.

GSC20196B-0 8/19

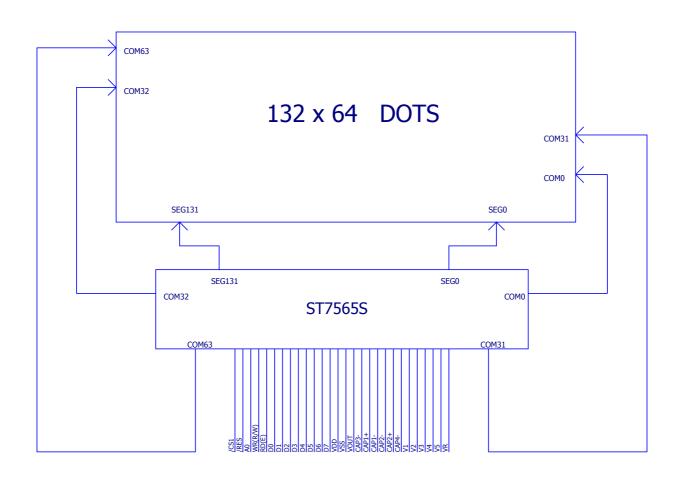

NO	SYMBOL	FUNCTION				
19	CAP1-	DC/DC voltage converter. Connect a capacitor between this terminal and the CAP1+ terminal.				
20	CAP2-	DC/DC voltage converter. Connect a capacitor between this terminal and the CAP2+ terminal.				
21	CAP2+	DC/DC voltage converter. Connect a capacitor between this terminal and the CAP2- terminal.				
22	CAP4-	DC/DC voltage converter. Connect a capacitor between this terminal and the CAP2+ terminal.				
23	V1	This is a multi-level power supply for the liquid crystal drive. The voltage Supply applied is determined by the liquid crystal cell, and is changed through the use of a resistive voltage divided or through changing the impedance using an op. amp. Voltage levels are determined based on VDD, and must maintain the relative magnitudes shown below.				
24	V2					
25	V3	VDD (= V0) ≧V1 ≧V2 ≧V3 ≧V4 ≧V5 When the power supply turns ON, the internal power supply circuits produce the				
26	V4	V1 to V4 voltages shown below. The voltage settings are selected using the LCD bias set command.				
		1/65 DUTY 1/49 DUTY 1/33 DUTY 1/55 DUTY 1/53 DUTY				
27	V5	V1 1/9*V5,1/7*V5 1/8*V5,1/6*V5 1/6*V5,1/5*V5 1/8*V5,1/6*V5 1/8*V5,1/6*V5 V2 2/9*V5,2/7*V5 2/8*V5,2/6*V5 2/6*V5,2/5*V5 2/8*V5,2/6*V5 2/8*V5,2/6*V5 V3 7/9*V5,5/7*V5 6/8*V5,4/6*V5 4/6*V5,3/5*V5 6/8*V5,4/6*V5 6/8*V5,4/6*V5 V4 8/9*V5,6/7*V5 7/8*V5,5/6*V5 5/6*V5,4/5*V5 7/8*V5,5/6*V5 7/8*V5,5/6*V5				
28	VR	Output voltage regulator terminal. Provides the voltage between VDD and V5 through a resistive voltage divider. IRS = "L": the V5 voltage regulator internal resistors are not used. IRS = "H": the V5 voltage regulator internal resistors are used.				

GSC20196B-0 9/19

7. Block Diagram

IRS : L IRS = "L": Do not use the internal resistors. The V5 voltage level is regulated by an external resistive voltage divider attached to the VR termina

9. Specification of Quality Assurance

1. Purpose

This standard for Quality Assurance should affirm the quality of LCD module products to supply to purchaser by POWERTIP DISPLAY CORPORATION (Supplier).

2. Standard for Quality Test

2.1 Inspection:

Before delivering, the supplier should take the following tests, and affirm the quality of product.

2.2 Electro-Optical Characteristics:

According to the individual specification to test the product.

2.3 Test of Appearance Characteristics:

According to the individual specification to test the product.

2.4 Test of Reliability Characteristics:

According to the definition of reliability on the specification for testing products.

2.5 Delivery Test:

Before delivering, the supplier should take the delivery test.

- 2.5.1 Test method: According to MIL-STD-105E, General Inspection Level take a single time.
- 2.5.2 The defects classify of AQL as following:

Major defect: AQL=0.65 Minor defect: AQL=2.5 Total defects: AQL=2.5

3. Nonconforming Analysis & Deal With Manners

- 3.1 Nonconforming analysis:
 - 3.1.1 Purchaser should supply the detail data of non-conforming sample and the non-suitable state.
 - 3.1.2 After accepting the detail data from purchaser, the analysis of nonconforming should be finished in two weeks.
 - 3.1.3 If supplier can not finish analysis on time, must announce purchaser before two weeks.
- 3.2 Disposition of nonconforming:
 - 3.2.1 If find any product defect of supplier during assembly time, supplier must chance the good product for every defect after recognition.
 - 3.2.2 Both supplier and customer should analyze the reason and discuss the disposition of nonconforming when the reason of nonconforming is not sure.

GSC20196B-0 12/19

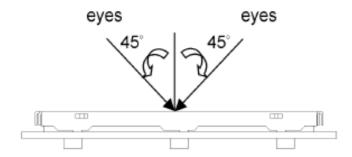

4. Agreement items

Both sides should discuss together when the following problems happen.

- 4.1 There is any problem of standard of quality assurance, and both sides think that must be modifier.
- 4.2 There is any argument item which does not record in the standard of quality assurance.
- 4.3 Any other special problem.

5. Standard of The Product Appearance Test

- 5.1 Manner of appearance test:
 - 5.1.1 The test must be under 20W × 2 or 40W fluorescent light, and the distance of view must be at 30 cm.
 - 5.1.2 When test the model of Tran missive product must add the reflective plate.
 - 5.1.3 The test direction is base on about around 45° of vertical line.

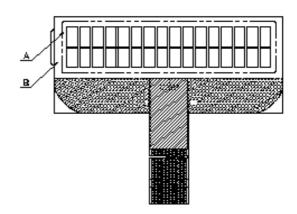

5.1.4 Definition of area:

A Area: Viewing area.

B Area: Out of viewing area.

(Outside viewing area)

5.2 Basic principle:

- 5.2.1 It will accord to the AQL when the standard can not be described.
- 5.2.2 The sample of the lowest acceptable quality level must be discussed by both supplier and customer when any dispute happened.
- 5.2.3 Must add new item on time when it is necessary.
- 5.3 Standard of inspection: (Unit: mm)

GSC20196B-0 13/19

10. Standard Specification for Reliability

1. Standard Specification for Reliability of Wide-Temperature COG

NO	Item	Description					
1.	High temperature operation	The sample should be allowed to stand at 70 ± 3 for 240(-0,+48) hours under driving condition.					
2.	Low temperature operation	The sample should be allowed to stand at -20 ± 3 for 240(-0,+48)hours under driving condition.					
3.	High temperature resistance	The sample should be allowed to stand at 80 ± 3 for $240(-0,+48)$ hours under no-load condition, and then returning it to normal temperature condition, and allowing it stand for 30 minutes.					
4.	Low temperature resistance	The sample should be allowed to stand at -30 ± 3 for 240(-0,+48) hours under no-load condition, then returning it to normal temperature condition, and allowing it stand for 24 hours.					
5.	Moisture resistance	The sample should be allowed to stand at 40 ± 3 , 90%RH MAX for 240(-0,+48) hours under no-load condition excluding the polarize, then taking it out and drying it at normal temperature.					
6.	Thermal shock resistance	The sample should be allowed to stand the following 10 Cycles of operation: 0 for 30 minutes normal temperature for 5 minutes +70 for 30 minutes normal temperature for 5 minutes, as one cycle.					
7.	ESD (Electrostatic Discharge)	Human Body Model: 2000 volt electrical discharge from a 100 pF capacitor to the tested device in series with a 1500 ohm resistor. Apply VDD & VSS to LCD module unit. Test for functionality no missing lines after the discharge, but LCD module may reset. Machine model: 200 volt electrical discharge from a 200 pF capacitor to the tested device with no series resistance. Apply to VDD & VSS to LCD module unit without including hand phone. Test for functionality no any missing lines after the discharge, but LCD module can be reset if display off.					

GSC20196B-0 14/19

2. Testing Conditions and Inspection Criteria

In order to do the final test the testing sample must be in room temperature for 24hours, to ensure stability.

NO	Item	Test Model	Inspection Criteria
1.	Current	Refer to Specification	The current must be under three times of
	Consumption		initiated test.
2.	Contrast	Refer To Specification	The contrast must be large than half of initiated test.
3.	Appearance	Visual inspection	Defect free.

3.Life Time

NO	Item	Description		
1.	Life time	Functions, performance, appearance, etc. shall be free from remarkable		
		deterioration within 50,000 hours under ordinary operating and storage		
		conditions room temperature (25 \pm 10), normal humidity (45 \pm 20 $\%$ RH),		
		and in area not exposed to direct sun light.		
2.	Life time	Functions, performance, appearance, etc. shall be free from remarkable		
		deterioration within 5,000 hours under ordinary operating and storage		
		conditions high temperature 70 , normal humidity(45± 20%RH), and in		
		area not exposed to direct sun light.		

Note: From our experience the life time of high humidity operation and high temperature operation as above mentioned could be achieved.
