

# TA7288P

## DUAL BRIDGE DRIVER

The TA7288P is a bridge driver that is ideal for normal / reverse switching.

This circuit offers four modes : normal rotation, reverse rotation, stop, and brake.

The output current is 1.0A (AVE.) and 2.0A (PEAK).

TA7288P has an ideal circuit configuration for VCR front tape loading and offers two types of power supply pins.

One is for output, the other for control. The  $V_{ref}$  pin on the output side used to control the motor voltage facilitates motor voltage adjustment. The IC requires little input current, enabling direct connection with CMOS.

OUTPUT CIRCUIT

Output voltage is controlled by  $V_{ref}$  voltage. Relationship between  $V_{OUT}$  and  $V_{ref}$  is

$$V_{OUT} = V_{BE} (\approx 0.7) + V_{ref}$$

$V_{ref}$  terminal required to connect to  $V_s$  terminal for stable operation in case of no requirement of  $V_{OUT}$  control.
