SCLS149C - DECEMBER 1982 - REVISED DECEMBER 2002

- Wide Operating Voltage Range of 2 V to 6 V
- High-Current 3-State Outputs Can Drive Up To 15 LSTTL Loads
- Low Power Consumption, 80-μA Max I<sub>CC</sub>
- Typical t<sub>pd</sub> = 8 ns
- ±6-mA Output Drive at 5 V
- Low Input Current of 1 μA Max
- Lock Bus-Latch Capability
- True Logic

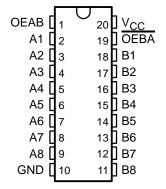

## description/ordering information

These octal bus transceivers are designed for asynchronous two-way communication between data buses. The control-function implementation allows for maximum flexibility in timing.

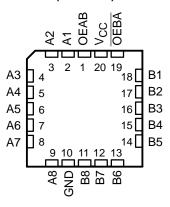

The 'HC623 devices allow data transmission from the A bus to the B bus or from the B bus to the A bus, depending upon the logic levels at the output-enable (OEAB and OEBA) inputs.

OEAB and OEBA disable the device so that the buses are effectively isolated. The dual-enable configuration gives the transceivers the capability to store data by simultaneously enabling OEAB and OEBA. Each output reinforces its input in this transceiver configuration. When both OEAB and OEBA are enabled and all other data sources to the two sets of bus lines are in the high-impedance state, both sets of bus lines (16 total) remain at their last states. The 8-bit codes appearing on the two sets of buses are identical.

–40°C to 85°C	SOIC – DW	Tape and reel	SN74HC623DWR	HC623
	SOP - NS	Tape and reel	SN74HC623NSR	HC623
	CDIP – J	Tube	SNJ54HC623J	SNJ54HC623J
–55°C to 125°C	CFP – W	Tube	SNJ54HC623W	SNJ54HC623W
	LCCC – FK	Tube	SNJ54HC623FK	SNJ54HC623FK

<sup>†</sup> Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

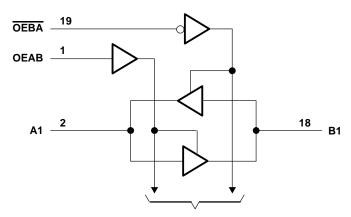

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

## **FUNCTION TABLE**

INP	UTS	ODEDATION
OEBA	OEAB	OPERATION
L	L	B data to A bus
Н	Н	A data to B bus
Н	L	Isolation
L	Н	B data to A bus, A data to B bus

## logic diagram (positive logic)

**To Seven Other Transceivers** 

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V <sub>CC</sub>		–0.5 V t	to 7 V
Input clamp current, $I_{IK}$ ( $V_I < 0$ or $V_I > V_{CC}$ ) (see	ee Note 1)	±2	20 mA
Output clamp current, I <sub>OK</sub> (V <sub>O</sub> < 0 or V <sub>O</sub> > V <sub>C</sub>	C) (see Note 1)	±2	20 mA
Continuous output current, $I_O$ ( $V_O = 0$ to $V_{CC}$ )		±3	35 mA
Continuous current through V <sub>CC</sub> or GND		±7	'0 mA
Package thermal impedance, θ <sub>JA</sub> (see Note 2)	: DW package	58	3°C/W
	N package		9°C/W
	NS package	60	)°C/W
Storage temperature range, T <sub>sto</sub>			150°C

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
  - 2. The package thermal impedance is calculated in accordance with JESD 51-7.

## recommended operating conditions (see Note 3)

			SN	SN54HC623		SN	174HC62	23	LINIT

## VOLTAGE WAVEFORM INPUT RISE AND FALL TIMES

VOLTAGE WAVEFORMS
PROPAGATION DELAY AND OUTPUT TRANSITION TIMES

VOLTAGE WAVEFORMS
ENABLE AND DISABLE TIMES FOR 3-STATE OUTPUTS

NOTES: A. C<sub>L</sub> includes probe and test-fixture capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. Phase relationships between waveforms were chosen arbitrarily. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  1 MHz,  $Z_{O} = 50 \Omega$ ,  $t_{f} = 6 \text{ ns}$ .
- D. The outputs are measured one at a time with one input transition per measurement.
- E. tpLz and tpHz are the same as tdis.
- F. tpzL and tpzH are the same as ten.
- G. tplH and tpHL are the same as tpd.
